Scheme code	JBMF/O/H/ARB/25/11/0011													
Asset Allocation Pattern of the scheme	The Asset Allocation Pattern of the Scheme under normal circumstances would be as under: <table><tr><th rowspan="2">Instruments</th><th colspan="2">Indicative allocations (% of total assets)</th></tr><tr><th>Minimum</th><th>Maximum</th></tr><tr><td>Equity and Equity-related instruments including equity derivatives</td><td>65</td><td>100</td></tr><tr><td>Debt and Money Market Instruments including the margin money deployed in derivative transactions</td><td>0</td><td>35</td></tr></table> The asset allocation as given above under normal circumstances is indicative and may vary according to circumstances at the sole discretion of the Fund Manager. Review and rebalancing will be conducted when the asset allocation falls outside the range indicated above, within a reasonable period, in line with the applicable SEBI Regulations. The exposure to derivative shown in the above asset allocation table is exposure taken against the underlying equity investments i.e. in case the Scheme have a long position in a security and a corresponding short position in the same security, then the exposure for the purpose of asset allocation will be counted only for the long position. The intent is to avoid double counting of exposure and not to take additional asset allocation with the use of derivative. If suitable arbitrage opportunities are not available in the opinion of the Fund Manager, the Scheme may hedge the equity portfolio by using derivatives or may invest in short term debt / money market instruments. The notional value of exposure in equity derivatives would be reckoned for equity securities exposure. The notional value of exposure in debt derivatives would be reckoned for debt and money market securities exposure. - As per Clause 12.11 of SEBI Master Circular for Mutual Funds dated June 27, 2024, as amended from time to time, the Scheme may engage in securities lending subject to a maximum of 20% in aggregate, of the net assets of the Scheme and 5% of the net assets of the Scheme in the case of a single intermediary. - As per Regulation 44 and 45 of the SEBI (Mutual Funds) Regulations, 1996, the Scheme may engage in short selling of securities in accordance with the applicable guidelines / regulations. - As per Clause 7.5, 7.6 and 12.25 of SEBI Master Circular for Mutual Funds dated June 27, 2024, the Scheme may invest in Equity / Debt Derivatives (Hedging and Non-hedging) up to 100% of its net assets of the Scheme. - Pursuant to para 12.25.3 of SEBI Master Circular for Mutual Funds dated June 27, 2024, cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure. Short-Term Defensive Considerations:
Subject to SEBI (MF) Regulations, the asset allocation indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the Fund Manager, the intention being at all times to seek to protect the interests of the investors. As per clause 1.14.1.2.b of SEBI Master Circular for Mutual Funds dated June 27, 2024, as may be amended from time to time, such changes in the investment pattern will be for short term and for defensive consideration only.

In the event of change in the asset allocation, the Fund Manager will carry out portfolio rebalancing within 30 calendar days from the date of such deviation or such other timeline as may be prescribed by SEBI from time to time.

Portfolio Rebalancing:
In the event of any deviations from the mandated asset allocation as mentioned above due to passive breaches, portfolio rebalancing will be carried out by the AMC/Fund Manager within 30 business days of the date of the said deviation. This rebalancing will be subject to prevailing market conditions and in the interest of the investors. In case the portfolio of the Scheme is not rebalanced within the period of 30 business days, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee of the AMC. The Investment Committee, if it so desires, can extend the timeline for rebalancing up to 60 business days from the date of completion of mandated rebalancing period. Further, in case the portfolio is not rebalanced within the aforementioned mandated plus extended timelines, the AMC shall comply with the prescribed restrictions, the reporting and disclosure requirements as specified in para 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024.

Investment Strategy	The Scheme will be actively managed. The Scheme will endeavour to invest in arbitrage opportunities between spot and futures prices of exchange traded equities and the arbitrage opportunities available within the derivative segment as per the investment objective and the asset allocation pattern of the
----------------------------	---

	Scheme. If suitable arbitrage opportunities are not available in the opinion of the Fund Manager, the Scheme may invest in debt and money market securities. The Fund Manager will evaluate the difference between the price of a stock in the futures market and in the spot market. If the price of a stock in the futures market is higher than in the spot market, after adjusting for costs and taxes the scheme shall buy the stock in the spot market and sell the same stock in equal quantity in the futures market, simultaneously. The Scheme will endeavor to build similar market neutral positions that offer an arbitrage potential for e.g. buying the basket of index constituents in the cash or futures segment and selling the index futures, etc. The Scheme would also look to avail of opportunities between one futures contract and another. The Fund Manager shall use derivatives within the permissible limits actively in-addition to hedging and rebalancing the portfolio subject to the Regulations and the investment objectives and the terms of the scheme set out elsewhere in this Scheme Information Document. The Scheme may deploy one or more of below mentioned strategies to the extent they are in line with the investment objective of the Scheme. 1) Cash Futures Arbitrage: The Scheme would look for market opportunities between the spot and the futures market. The cash futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock. The Scheme will first buy the stocks in cash market and then sell in the futures market to lock the spread known as arbitrage return. Buying the stock in cash market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the cash market. Thus, there is a convergence between the cash market and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier. However, the position could even be closed earlier in case the price differential is realized before expiry or better opportunities are available in other stocks. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of-capital. The fund may also enter into reverse arbitrage strategies, i.e., if futures were quoting at a discount, futures would be bought and shares would be sold to lock in an arbitrage profit. 2) Index Arbitrage: The Nifty 50 derives its value from fifty constituent stocks; the constituent stocks (in their respective weights) can be used to create a synthetic index matching the Nifty Index. Also, theoretically, the fair value of a future is equal to the spot price plus the cost of carry. Theoretically, therefore, the pricing of Nifty Index futures should be equal to the pricing of the synthetic index created by futures on the underlying stocks. Due to market imperfections, the index futures may not exactly correspond to the synthetic index futures. The Nifty Index futures normally trades at a discount to the synthetic Index due to large volumes of stock hedging being done using the Nifty Index futures giving rise to arbitrage opportunities. One instance in which an index arbitrage opportunity exists is when Index future is trading at a discount to the index (spot) and the futures of the constituent stocks are trading at a cumulative premium. The fund manager shall endeavour to capture such arbitrage opportunities by taking long positions in the Nifty Index futures and short positions in the synthetic index (constituent stock futures). Based on the opportunity, the reverse position can also be initiated. 3) Portfolio Protection / Hedging: The Scheme may use exchange-traded derivatives to hedge the equity portfolio. 4) Calendar Spread: Under this strategy, the Scheme attempts to extract and profit from the spread (the difference between buying and selling price) created between two derivative contracts (e.g. Futures) of the same underlying instrument but with different expiries.
--	---

5) Corporate Action / Event Driven Strategies:

Dividend Arbitrage: Around dividend declaration time, the stock futures / options market can provide a profitable opportunity. Generally, the stock price declines by the dividend amount when the stock goes ex-dividend. Buy-Back/ Open offers Arbitrage: Companies that are targets for buy-backs/ open offers, provide opportunities depending on the difference between the traded price and the buy-back open offer price. The scheme will take a long position in a stock for which the buy-back/ open offer price is expected to be higher than the traded price. Depending on the probability of the open offer and acceptance of shares, the scheme may take a certain short position in the future of the same stock. Since the position is related to a stock-specific event, it is expected to be uncorrelated with the overall direction of the equity markets. This is not an exhaustive list as every corporate action could offer a different and unique opportunity.

6) Merger/ Risk Arbitrage: When the Company announces any merger, amalgamation, hive off, demerger, etc., there could be opportunities due to price differential in the cash and the derivative market. In case the merger is between 2 listed companies, the arbitrage can be based on the differential between the announced swap ratio and the actual traded prices for the 2 stocks.

7) Convertible Securities Arbitrage (when available): This strategy attempts to extract value from options embedded in convertible securities. Typically, the strategy involves purchasing a convertible security and then hedging the underlying equity security.

8) Covered Call Strategy: The covered call strategy is a strategy where a fund manager writes call options against an equivalent long position in an underlying stock thereby giving up a part of the upside from the long position. The strategy allows the fund manager to earn premium income from the option writing in addition being able to capture the remaining part of the upside.

The Scheme may deploy one or more of the above mentioned Strategies to the extent they are in line with the investment objective of the Scheme. These strategies are only indicative, and the Fund Manager may adopt other strategies depending on market conditions and regulatory compliance. Additionally, the provision for trading in derivatives is an enabling provision and it's not binding on the Scheme to undertake trading on day - to - day basis.

The Scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid down under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rate outlook. The Scheme will have an exposure to derivatives for hedging, portfolio balancing and optimising returns. The Debt and Money Market Instruments include any margin money that has to be maintained for the derivative position. The margin money could also be maintained partly as Fixed deposits with Scheduled commercial banks. The maturity profile of the rest of the debt and money market component would be determined by the view of the Fund Manager. If the view of the Fund Manager is that interest rates would go up then the average maturity of the debt & money market portfolio would be reduced and if the view of the Fund Manager is that interest rates would decline, then the average maturity may be increased. This would however depend on the view of the Fund Manager and can substantially change, depending on the prevailing market circumstances. It's important to note that the above strategies are just examples, and the Fund Manager may adopt other strategies as well, depending on market conditions and regulatory compliance.

Derivatives Strategy

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of the Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies. Derivative investments carry certain risks and issues arising out of such dealings. The risks associated with the use of derivatives -either for hedging or for portfolio balancing -are different from, and possibly greater than, the risks associated with investing directly securities and other traditional investments.

	For detailed derivative strategies, please refer to SAI. Portfolio Turnover Portfolio Turnover is a term used to measure the volume of trading that occurs in a Scheme's portfolio during a given time period. The Scheme being an open ended scheme, it is expected that there would be frequent subscriptions and redemptions. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. If trading is done frequently there may be an increase in transaction cost such as brokerage paid etc. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. The Scheme has no specific target relating to portfolio turnover. Risk Control Risk is an inherent part of the investment function. Effective Risk management is critical to fund management for achieving financial soundness. Investment by the Scheme would be made as per the investment objective of the Scheme and in accordance with SEBI Regulations. AMC has adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep in line with the investment objective of the Scheme. The risk control process would include identifying the risk and taking proper measures for the same. The system has incorporated all the investment restrictions as per the SEBI guidelines and enables identifying and measuring the risk through various risk management tools like various portfolio analytics, risk ratios, average duration and analyses the same and acts in a preventive manner.

In case of investments through Systematic Investment Plan (SIP), Systematic Transfer Plan (STP), other methods as may be offered by the AMC etc. the Units would be allotted as per the closing NAV of the day on which the funds are available for utilization irrespective of the installment date of the SIP, STP, etc. Since different payment modes have different settlement cycles including electronic transactions (as per arrangements with Payment Aggregators/Banks/Exchanges etc), it may happen that the investor's account is debited, but the money is not credited within cut-off time on the same date to the Scheme's bank account, leading to a gap/delay in Unit allotment. Investors are therefore urged to use the most efficient electronic payment modes to avoid delays in realization of funds and consequently in Unit allotment. Redemptions including switch-outs: In respect of valid applications received up to 3.00 pm on a Business Day by the Mutual Fund, same day's closing NAV shall be applicable.
