	<p>prescribed restrictions, the reporting and disclosure requirements as specified in para 3.11.3 and 3.11.4 of SEBI Master Circular on Mutual Funds dated March 20, 2026.</p>
<p>Investment Approach</p>	<p>The Investment Strategy aims to achieve long-term capital appreciation along with income generation by investing across a diversified mix of equity and equity-related instruments, debt and money market instruments, REITs/InvITs, derivative-based strategies such as merger arbitrage and collar trades, as well as arbitrage opportunities, IPOs, and other special situation investments. This objective is pursued through an active opportunity-driven investment strategy built predominantly on low-volatility, income-oriented investment approaches.</p> <p>The fund may invest in merger arbitrage opportunities. These arise when one company announces the acquisition of another company on a share-swap basis, leading to an arbitrage opportunity where buying one in cash market and selling the other in futures market can deliver returns.</p> <p>The Collar strategy systematically generates income using long underlying stock or futures, call writing, and downside protection via put options, with stocks selected based on factors such as option liquidity, signal research scores etc. and other relevant metrics. This allows fund to earn options premium income while hedging for the tail events. The systematic investment approach integrates the expertise of the Fund Managers with advanced signal research scores provided by entities of BlackRock group. These signal research scores are derived using big data (which includes traditional data and alternative data), and leverages machine learning, a form of artificial intelligence and advanced data analytics, which are constantly being improved. Signals are selected based on their economic rationale and demonstrated statistical relevance. The portfolio construction process is powered by BlackRock's technology platform - Aladdin, which has been licensed to JioBlackRock AMC. This process is augmented by an optimization process which leverages the composite research score along with other inputs from the investment team such as risk constraints, transaction cost, market liquidity, stock constraints and such other inputs.</p> <p>Investment in REITs and InvITs is based on an analysis of forward yield assessment, secondary market liquidity, interest-rate environment, evaluation of the underlying asset's riskiness and other such factors.</p> <p>The fund may use other derivative based strategies as it may deem fit.</p> <p>Beyond the above mentioned strategies, the Fund may also deploy in cash–futures arbitrage to capture short-term anomalies. Opportunistic allocations such as IPOs and other special situation trades — open offers, buybacks, and similar corporate actions — will be executed selectively based on favorable risk-reward profiles and are typically short-duration, liquidity-driven positions.</p> <p>The Investment strategy will invest in a diversified portfolio of debt and money market instruments like T-bills, government securities, debt and other liquid instruments with a view to capture the term and credit spreads. Every investment opportunity in debt and money market instruments would be assessed with regard to parameters such as credit risk, interest rate risk, liquidity risk and other such parameters. Investments made from the net assets of the Investment Strategy would be in accordance with the investment objective of the Investment Strategy and the provisions of the SEBI (MF) Regulations.</p> <p>The overall strategy remains dynamic, with allocations continually adjusted based on market opportunities, liquidity conditions, and risk-reward considerations. The portfolio is designed to maintain controlled drawdowns and aims to deliver less-volatile returns annually.</p> <p>Furthermore, continuous monitoring of portfolio holdings and market developments allows for timely adjustments to manage risks effectively. As markets evolve , the Fund Managers would modify or add to the rules governing the investment process. The Fund Manager will rebalance the portfolio of the Investment Strategy as and when required.</p>

Derivatives Strategy

The Investment Strategy may take exposure to derivatives for the purpose of hedging / non-hedging, portfolio rebalancing and other purposes as permitted by regulations from time to time. The investment strategy shall also have maximum 25% unhedged short exposure in permissible exchange traded derivative instruments like Stock / Index Futures or Options, Interest Rate Derivatives, Forward Rate Agreements, Overnight Index Swaps or other instruments. Such exposure to derivative instruments will be in line with the investment objective and overall strategy of the Investment Strategy. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

For detailed derivative strategies, please refer to SAI.

Being an interval investment strategy, it is expected that there would be frequent subscriptions and redemptions. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. If trading is done frequently there may be an increase in transaction cost such as brokerage paid etc. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. The Investment Strategy has no specific target relating to portfolio turnover.</p> <p>Risk Control</p> <p>Investments made by the Investment Strategy would be in accordance with the investment objective of the Investment Strategy and provisions of SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.</p> <p>The risk control process involves identifying risks and taking proper measures for the same. The Investment Strategy may also use various derivatives products for the purpose of trading, hedging and portfolio rebalancing from time to time, with an attempt to protect the value of the portfolio and enhance investors' interest.</p> <p>While these strategies are expected to mitigate risk to a major extent, the AMC provides no assurance that these risks will be completely eliminated.</p>
